Lab5

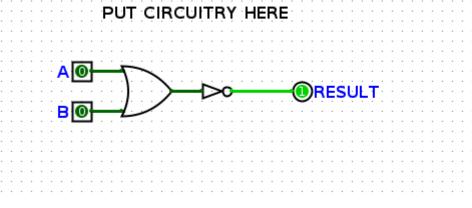

Part 1: Sub-Circuits

本任务要求我们画出4个比较经典的电路。

NAND 与非门

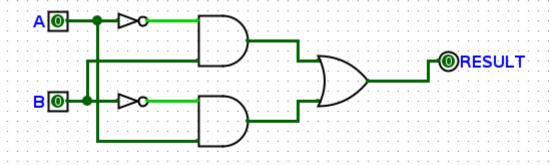

NOR 或非门

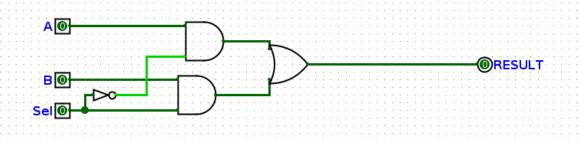

XOR 异或门

PUT CIRCUITRY HERE

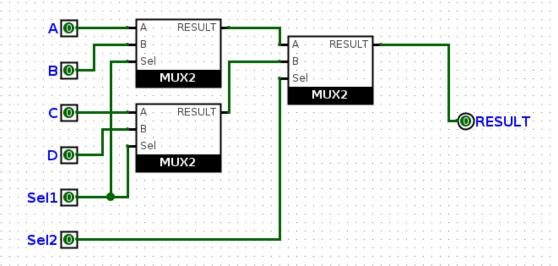

2-to-1 MUX

PUT CIRCUITRY HERE

4-to-1 MUX

PUT CIRCUITRY HERE

Part 2: Storing State

PUT CIRCUITRY HERE 01 00000110ADD OUT 00000101REG_OUT

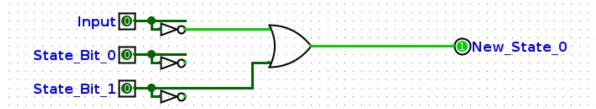

Part3: FSMs to Digital Logic

我们可以发现:

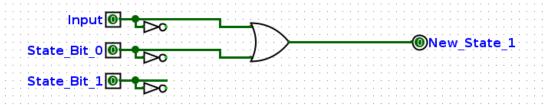

next st1 = input | st0

 $next st0 = \sim input | st1$

PUT CIRCUITRY HERE

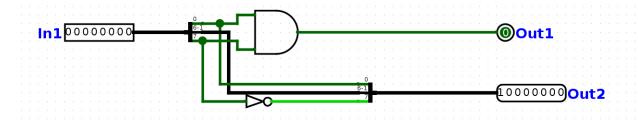

PUT CIRCUITRY HERE

Part 4: Practice with Splitters

sign and magnitude:最高位为符号位,剩下7位该是什么就是什么。

PUT CIRCUITRY HERE

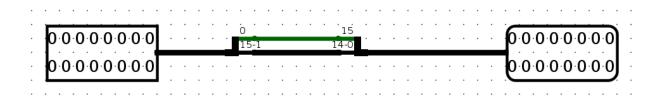

Part 5: Rotate Right

题意还是比较简单的,把A向右移B位,然后被移动的bit补全到最左边去。

其中A是16位, B是8位。

我们考虑 B 的二进制的每一位对答案的贡献,因此我们可以提前做出移动一位,两位,四位,八位的电路,最后多选器选择一下即可。

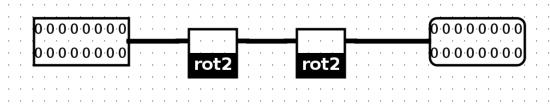

移动一位

移动两位

移动四位

移动八位
